Duration	7 mins 12 secs
Grade	**15.00** out of 15.00 (**100**%)

Question **1**

Correct

Mark 1.00 out of 1.00

Which of the following is a conventional searching technique?

a. Binary search
b. Linear search ✓
c. Dynamic search
d. Hashing

Question **2**

Correct

Mark 1.00 out of 1.00

Which method of searching involves sequentially comparing each element until a match is found?

a. Jump search
b. Hashing
c. Linear search ✓
d. Binary search

Question **3**

Correct

Mark 1.00 out of 1.00

Which of the following best describes the process of a linear search?

a. Checking each element sequentially ✓
b. Dividing the list in half repeatedly
c. Sorting the list before searching
d. Skipping every second element

Question **4**

Correct

Mark 1.00 out of 1.00

In _____ checks the elements of a list, one at a time, without skipping any element.

a. Binary search

b. Linear search ✓

c. Both (1) & (3)

d. Hash search

Question **5**

Correct

Mark 1.00 out of 1.00

Given an array arr = {45,77,89,90,94,99,100} and key = 99; what are the mid values(corresponding array elements) in the first and second levels of recursion?

a. 90 and 94

b. 89 and 94

c. 89 and 99

d. 90 and 99 ✓

Question **6**

Correct

Mark 1.00 out of 1.00

If a list contains 1000 elements, how many comparisons would a binary search typically make in the worst case?

a. 1000

b. 10 ✓

c. 100

d. 500

Question **7**

Correct

Mark 1.00 out of 1.00

What is the key characteristic of binary search?

a. It always starts from the beginning of the list
b. It works on unsorted lists
c. It can be applied only if the list is sorted ✓
d. It compares elements sequentially

Question **8**

Correct

Mark 1.00 out of 1.00

Which of the following is not a limitation of binary search algorithm?

a. Requirement of sorted array is expensive when a lot of insertion and deletions are needed
b. Must use a sorted array
c. Binary search algorithm is not efficient when the data elements more than 1500 ✓
d. There must be a mechanism to access middle element directly

Question **9**

Correct

Mark 1.00 out of 1.00

What is the time complexity of linear search in the worst case?

a. O👎 ✓
b. O(log n)
c. O(n log n)
d. O(1)

Question **10**

Correct

Mark 1.00 out of 1.00

In which situation is linear search more efficient than binary search?

a. When the list is large and unsorted
b. When the list is large and sorted
c. When the list is small and unsorted ✓
d. When the list is small and sorted

Question **11**

Correct

Mark 1.00 out of 1.00

In binary search, if the target element is less than the middle element, where does the search continue?

a. In the right sublist
b. In the entire list
c. In the left sublist ✓
d. At the beginning of the list

Question **12**

Correct

Mark 1.00 out of 1.00

What happens when the element is found in linear search?

a. The search starts over from the beginning
b. The search stops immediately ✓
c. The search backtracks to find duplicate elements
d. The search continues until the end of the list

Question **13**

Correct

Mark 1.00 out of 1.00

In the context of searching, what is a successful search?

a. When the list is sorted
b. When the list contains duplicate elements
c. When the search algorithm finishes
d. When the element is found in the list ✓

Question **14**

Correct

Mark 1.00 out of 1.00

In a linear search, how many comparisons are made in the worst-case scenario to find an element in a list of size n?

a. n ✓
b. log n
c. 1
d. n/2

Question **15**

Correct

Mark 1.00 out of 1.00

Which of the following is a limitation of binary search?

a. It does not work with negative numbers
b. It is slower than linear search for small lists
c. It requires the list to be sorted ✓
d. It can only be applied to large lists
